Diagnostic Histopathology

Published in association with the Pathological Society of Great Britain and Ireland

This journal is an independent international periodical which is published quarterly. It aims to provide a forum for original papers concerned primarily with correlating structure and function in normal and pathological tissues.
Within this context the Journal will be devoted primarily to descriptive and investigative histopathology with respect to improving tissue diagnosis. Good photomicrographs are of particular interest and value to histopathologists and emphasis will be placed on the quality of illustrations published. Original articles dealing with new techniques appropriate to histopathology, cell biology, embryology and teratology in relation to human disease will also be encouraged. Single case reports will not be published unless they are of exceptional interest. Review articles related to current topics of interest together with editorials, a letter column and reviews of recently published books will form regular features of the Journal.
